Vox tonelab st preset list.

Unlocking your VOX product's full potential is now easier than ever! Introducing Tone Room, a revolutionary software that lets you edit amp models and effects like a pro. Whether you're jamming at home or on-the-go, this intuitive tool makes it simple to get the most out of your VOX amps using your PC, Mac, or iOS device. Tone Room is designed specifically for VOX products, including the VX II, VT20X/40X/100X. Simply connect your amplifier via a USB cable and start editing sounds, managing presets, and backing up your settings. Don't forget to install the VOX USB MIDI Driver before using Tone Room on PC or Mac. Some minor updates have been made in Version 1.1.1 to ensure stability.

A guitar enthusiast since childhood (now 41), I've always had a passion for Rock, blues, and Christian worship music. I purchased my VOX product around the same time as upgrading other gear - it was used with my Mesa Boogie F50 and Gibson Les Paul or Fender Stratocaster. Although it looked great with two expression pedals and the valve showing, I found it too complex to program properly for live gigs. Even with pre-programmed channels, I struggled to achieve equal volumes/levels when switching between presets, especially when moving from clean to crunched sounds. When used in bypass mode, the unit seemed to lose gain/brightness, even with the gain switch set to max. This was frustrating, but I did enjoy using it for recording sessions where I had more time to dial in effects and play around. The Vox Valvetronix Tonelab SE Guitar Effects Processor is a powerful device that offers a wide range of effects and amp models for live performance. Its rock-solid construction can withstand rough handling, as seen in the reviewer's accidental drop, which only caused minor damage. This unit is highly recommended for those who have the time, patience, and ability to fully utilize its features. Although the reviewer did not generate enough time to get the best out of it, they found that a simpler setup was more appealing. The Tonelab SE was developed by incorporating circuitry from the original Vox Tonelab tabletop multi-effects processor into the VC12 floor controller. It offers 50 effects, an increased number from its predecessor's 22, and a pair of analog stereo outputs for connection to guitar amplifiers. The Valve Reactor Tube, a versatile and powerful amplifier, boasts an impressive range of features. Its program storage allows for easy switching between different amp models, including Cabinet Simulator Models that mimic the sound of various cabinets. Users can also experiment with Total Effects, Drive Pedal Effects, Modulation Effects, Delay Effects, and Types of Reverb to add depth and dimensionality to their sound. To minimize noise and hum, the unit features Noise Reduction technology. Expression Pedals enable dynamic control over effects parameters, while a built-in Tuner helps musicians keep their instruments in tune. Internal Monitor Speakers allow for private practice sessions or small ensemble rehearsals, and the USB Interface enables seamless file transfer and editing. The device also includes S/PDIF Digital Interface for connecting to digital recording equipment and Midi In/Out for controlling external devices. Downloadable software updates keep the Valve Reactor Tube current and competitive. Available in various configurations from 2003-2013, the Valve Reactor Tube's specifications include: * Number of preamp tubes: 1 - 12AX7 * Power output: 96W, 96W, 120W, 100W, 200W * Effects types: + Total effects: 22 + Drive pedal effects: 50 + Modulation effects: 26 + Delay effects: 45 + Reverb types: 11 * Noise reduction: 10 * Expression pedals: 16 * Tuner: Yes * Internal monitor speakers: Yes * USB interface: Yes * S/PDIF digital interface: Yes * Midi In/Out: Yes
